

## ENERGY EFFICIENCY POLICY

Energy Efficiency Policy To protect our world from possible dangers, we use our energy efficiently and set targets to reduce our energy consumption. To achieve this:

- We follow national and international standards, laws and regulations to fulfill our responsibilities towards nature and our legal obligations, carry out voluntary measures to reduce energy consumption and/or continuously improve our energy consumption performance, and monitor the results of our actions.
- We set targets and integrate energy efficiency into our training programs to encourage the participation of our employees.
- We value cooperation with all stakeholders to create common goals and outcomes in energy management. We strive to maintain interaction with our guests, employees, visitors, and all business partners to reach a collective awareness and understanding of energy efficiency.
- We endeavor to research, find, purchase, and use energy-efficient suitable products, equipment, devices, and technology alternatives.
- We aim to document our energy management system, disseminate it in all departments, update it as necessary, review it, and continuously improve it.
- We evaluate energy threats or emergencies such as energy scarcity and plan possible precautions.

Energy efficiency policies are among the areas that need to be treated with sensitivity, due to their direct relationship with the sustainability of economic growth and social development goals on one hand, and their key role in reducing total greenhouse gas emissions on the other. As Club Felicia Village, we would like to announce that we commit to complying with all the mandatory regulations to maximize energy efficiency.
